

Example testing-transactions-bmt can be browsed at https://github.com/apache/tomee/tree/master/examples/testing-transactions-bmt

Shows how to begin, commit and rollback transactions using a UserTransaction via a Stateful Bean.

Movie

```
package org.superbiz.injection.tx;
import javax.persistence.Entity;
import javax.persistence.GeneratedValue;
import javax.persistence.Id;
@Entity
public class Movie {
   0Id
   @GeneratedValue
    private Long id;
    private String director;
    private String title;
    private int year;
    public Movie(String director, String title, int year) {
        this.director = director;
        this.title = title;
        this.year = year;
    }
   public Movie() {
   }
    public Long getId() {
        return id;
    }
    public void setId(Long id) {
        this.id = id;
    }
    public String getDirector() {
        return director;
    }
    public void setDirector(String director) {
        this.director = director;
```

```
public String getTitle() {
    return title;
}

public void setTitle(String title) {
    this.title = title;
}

public int getYear() {
    return year;
}

public void setYear(int year) {
    this.year = year;
}
```

Movies

```
package org.superbiz.injection.tx;
import javax.annotation.Resource;
import javax.ejb.Stateful;
import javax.ejb.TransactionManagement;
import javax.ejb.TransactionManagementType;
import javax.persistence.EntityManager;
import javax.persistence.PersistenceContext;
import javax.persistence.PersistenceContextType;
import javax.persistence.Query;
import javax.transaction.UserTransaction;
@Stateful(name = "Movies")
@TransactionManagement(TransactionManagementType.BEAN)
public class Movies {
    @PersistenceContext(unitName = "movie-unit", type = PersistenceContextType
.TRANSACTION)
    private EntityManager entityManager;
    @Resource
    private UserTransaction userTransaction;
    public void addMovie(Movie movie) throws Exception {
        try {
            userTransaction.begin();
            entityManager.persist(movie);
            //For some dummy reason, this db can have only 5 titles. :0)
            if (countMovies() > 5) {
                userTransaction.rollback();
            } else {
                userTransaction.commit();
            }
        } catch (Exception e) {
            e.printStackTrace();
            userTransaction.rollback();
        }
    }
    public Long countMovies() throws Exception {
        Query query = entityManager.createQuery("SELECT COUNT(m) FROM Movie m");
        return Long.class.cast(query.getSingleResult());
    }
}
```

persistence.xml

```
<persistence xmlns="http://java.sun.com/xml/ns/persistence" version="1.0">
```

```
<persistence-unit name="movie-unit">
  <jta-data-source>movieDatabase</jta-data-source>
  <non-jta-data-source>movieDatabaseUnmanaged</non-jta-data-source>
  <class>org.superbiz.injection.tx.Movie</class>
```

MoviesTest

```
package org.superbiz.injection.tx;
import org.junit.Assert;
import org.junit.Test;
import javax.ejb.EJB;
import javax.ejb.embeddable.EJBContainer;
import java.util.Properties;
public class MoviesTest {
   @EJB
    private Movies movies;
   @Test
    public void testMe() throws Exception {
        final Properties p = new Properties();
        p.put("movieDatabase", "new://Resource?type=DataSource");
       p.put("movieDatabase.JdbcDriver", "org.hsqldb.jdbcDriver");
        p.put("movieDatabase.JdbcUrl", "jdbc:hsqldb:mem:moviedb");
        EJBContainer.createEJBContainer(p).getContext().bind("inject", this);
       movies.addMovie(new Movie("Asif Kapadia", "Senna", 2010));
        movies.addMovie(new Movie("José Padilha", "Tropa de Elite", 2007));
       movies.addMovie(new Movie("Andy Wachowski/Lana Wachowski", "The Matrix", 1999
));
        movies.addMovie(new Movie("Quentin Tarantino", "Reservoir Dogs", 1992));
        movies.addMovie(new Movie("Joel Coen", "Fargo", 1996));
        movies.addMovie(new Movie("Joel Coen", "The Big Lebowski", 1998));
       Assert.assertEquals(5L, movies.countMovies().longValue());
   }
}
```
